

**Nama: Giza**

**Prodi: Ilkom**

**Semester : 1**

## **Contoh-contoh Program Penulisan aturan sintaks & tipe data numerik + string.**

### **1). Cara membuat variabel**

The screenshot shows a Python IDE with a dark theme. The main editor window displays a Python script with the following code:

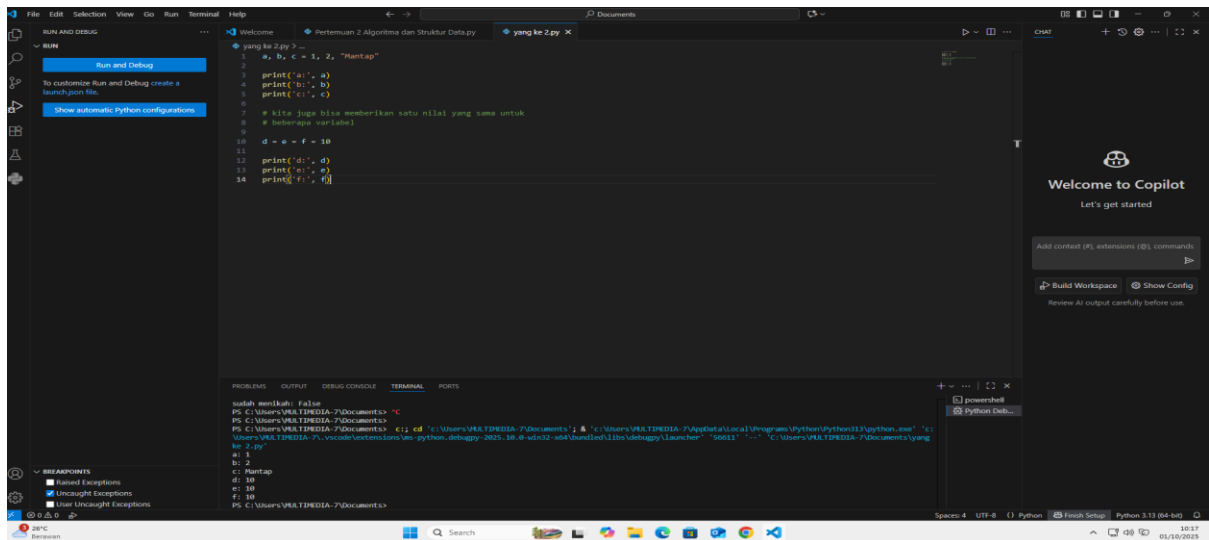

```
1 nama = 'giza'
2 usia = 18
3 sudah_menikah = False
4
5 print('nama:', nama)
6 print('usia:', usia)
7 print('sudah menikah:', sudah_menikah)
```

The output of the script is visible in the terminal window at the bottom:

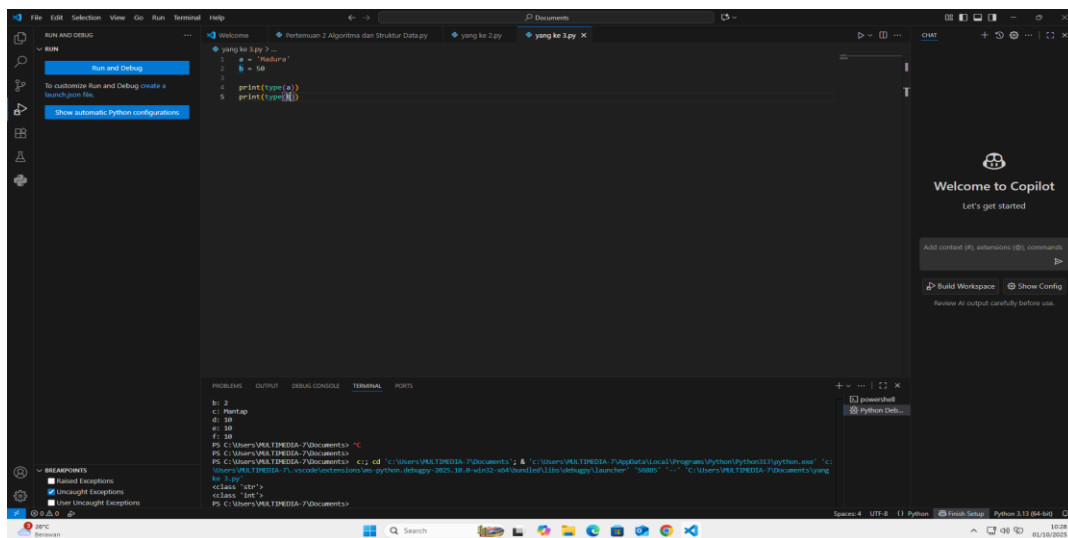

```
PS C:\Users\MULTIMEDIA-7\Documents> python .\Program Python\Python15\python.py
nama: giza
usia: 18
sudah menikah: False
PS C:\Users\MULTIMEDIA-7\Documents>
```

The IDE interface includes a sidebar on the left with icons for Explorer, Search, Run and Debug, and Extensions. The top menu bar includes File, Edit, Selection, View, Go, Run, Terminal, and Help. The bottom status bar shows the current file is 'Program Python\Python15\python.py' and the Python version is 3.11.94 bit.

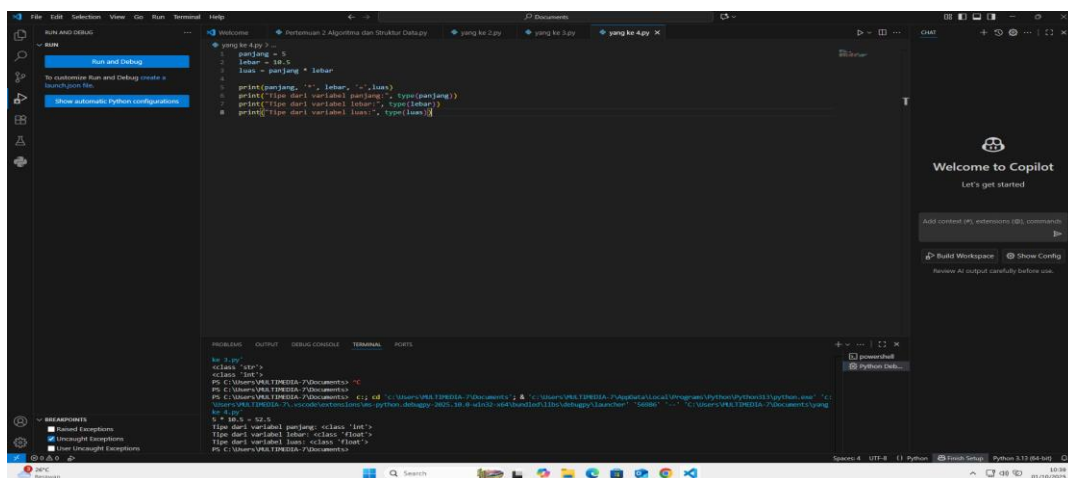

### **2). Aturan assigment**

### 3). Memeriksa type data pada python

### 4). Mencoba type data numerik

### 5). Tipe data string
